

Press Release

## BloqSens is now ISO/IEC 27001 certified

**Biel/Bienne, 20 April 2026 – BloqSens AG is now ISO/IEC27001 certified. This sends a clear message: information security, reliability, and the responsible handling of information are our top priorities.**

This certification confirms that BloqSens has established an information security management system (ISMS) that meets the internationally recognized requirements of the standard.

ISO/IEC 27001 defines the requirements for systematic, risk-based management of information security and is recognized worldwide as the authoritative standard in this field.

For BloqSens, this certification is an important milestone. It underscores the company's commitment to managing information security not in isolation as a technical matter, but holistically through clear processes, defined responsibilities, and continuous improvement. Especially in data-driven and networked business models, this is a key factor for reliability and sustainable growth. ISO describes ISO/IEC 27001 as a standard for the establishment, implementation, maintenance, and continuous improvement of an information security management system.

The certification also brings concrete benefits for customers. With BloqSens, they gain a partner that addresses the protection of sensitive information in a structured manner, systematically assesses risks, and has established appropriate measures. This builds trust, reduces uncertainties in collaboration, and strengthens the foundation for secure digital processes, resilient partnerships, and the professional handling of confidential information.

According to ISO, compliance with ISO/IEC 27001 demonstrates that an organization has established a system for managing risks related to the security of the data it processes or holds.

We are delighted with this achievement and thank everyone involved for their contribution.
