BloqSens is Catena-X certified – opening the door to the global automotive network for Swiss suppliers

Biel/Bienne, 19 May 2026 – BloqSens AG, a Swiss provider of digital product passports, has been officially certified for the global Catena-X ecosystem. As one of the first Swiss companies in this network, BloqSens AG enables secure, digital data exchange within the automotive value chain.

From Competitive Advantage to Necessity

Driven by international regulations such as the EU Battery Regulation, leading automotive manufacturers (OEMs) and their Tier 1 suppliers are increasingly awarding new contracts exclusively to partners with Catena-X connectivity. For Swiss SMEs, this represents a significant technological hurdle. BloqSens offers direct access here and ensures the global competitiveness of the Swiss supplier market.

“Connection to Catena-X is no longer a ‘nice-to-have’”, explains Peter Krummenacher, CEO of BloqSens AG. “With our certification, we relieve Swiss suppliers of the technological complexity so that their market access remains seamlessly secured worldwide.”

Successful real-world demonstration with Sika at the Hannover Messe

BloqSens has already successfully demonstrated how this works in practice at the Hannover Messe: In a groundbreaking use case, raw material data from the chemical data room (Chem-X) was enriched with material and PCF (Product Carbon Footprint) data from the Swiss specialty chemicals group Sika and securely made available to an OEM in the automotive network.

Since Catena-X has long since expanded beyond Europe to include the U.S., China, and Japan, the BloqSens platform serves as Switzerland’s key to the global data room—while fully preserving companies’ data sovereignty.

About BloqSens AG

BloqSens AG is a leading Swiss specialist in Digital Product Passports (DPP). The ISO 27001- and Catena-X-certified company offers a secure platform for creating, managing, and sharing product information. As a GS1 Solution Partner, BloqSens ensures seamless interoperability and end-to-end traceability through global standards. In doing so, the company helps industrial enterprises efficiently meet regulatory requirements and actively shape the transition to a circular economy.
